

TPR Look Up

(For Multi-Rate Electricity Meters)

Now includes all TPR codes

The TPR must be checked for Multi-Rate meters to determine if the readings are transposed, and/or these readings are allocating correctly to each rate on the bill.

**Any bills/invoices released where the readings are transposed will be incorrect.
For example, we could be billing day readings to a night rate price.**

Enter TPR	210
------------------	------------

Rate	Night
-------------	--------------

Meter Type	4-rate SToD
-------------------	-------------

Delinked TPRs:
Are where Central Networks (CN) or Western Power Distribution (WPD) set time bands are applied.
--
CN tariffs are all delinked and therefore set time bands are applied.

Active Time Periods	Rate 01	Rate 02	Rate 03	Rate 04	Rate 05
(Active Between)	R1: 0030-0730	R2: None	R3: None	R4: None	R5: None

Please Note:

Some TPR codes may be mislabeled. For example a TPR may state that this is a Day rate, but is in fact for an Evening/Weekend rate.
Always refer to the Active Time Periods to make sure.

Here are some examples:

Rate 01: 0000-0700 + Rate 02: 1900-2400 = **Evening/Weekend** (Active from 7.00 PM in the evening)

Rate 01: 0700-1900 + No other rates = **Day rate** (Active from 7.00 AM until 7.00 PM)

Rate 01: 0000-0700 + Rate 02: 2300-2400 = **Night** (Active from 11.00 PM (Night) until 7.00 AM (Morning))
